Milo Nezval Promoted to Product Engineer

MG SYSTEMS
MENOMONEE FALLS, WI, U.S.A.

MG Systems & Welding is pleased to announce the promotion of Milo Nezval to the position of Project Engineer. In this new position, Nezval will be the engineering liaison between the Menomonee Falls plant and the parent company Messer in Gross Umstadt, Germany.

"I have a passion for our products and business," said Nezval. "I think it is important to be willing to take up new challenges and tasks. I feel very fortunate to be working for MG."

Nezval has worked for MG since 1995. He started as an electrical assembler and then moved to the Service Department. In this position, he travelled around the country to repair customers' machines. He enjoyed working with customers and building relationships with them. Nezval was born in Czechoslovakia and earned a degree in Electrical Engineering there before emigrating to the U.S.

Nezval's position is newly created. His ability to speak several languages, his background in electrical engineering and his customer-service skills make him a great choice for a liaison between Germany and the United States.

MG Systems and Welding, Inc. is known as the premier manufacturer of thermal cutting gantry machines. The machines use advanced plasma and oxyfuel cutting tools to cut shapes from metals. A full range of equipment is provided by MG Systems, with sales and service offices and dealers/distributors located

throughout North America. All machines are assembled in the Menomonee Falls, WI plant.

MG Systems equipment is used in all types of manufacturing activities, including heavy-duty equipment manufacturers, metal service centers, shipyards, job shops and fabricators.

Visit the MG Systems Web site at www.mg-systems-welding.com to see the productivity gains that are possible with MG Systems equipment or contact MG Systems and Welding, Inc. to learn how MG Systems can assist you with your plate-processing needs. Phone 262-255-5520 or e-mail sales@messer-mg.com today.
