

ProLine 2200

Innerlogic history of innovations:

- First with 200 Amp high-density plasma cutting
- First with higher cutting speeds
- First graphic display for the plasma power source
- **And now, first with affordable 200 Amp high-density plasma**

Introducing the latest in plasma process technology, the ProLine 2200 from InnerLogic. The new ProLine 2200 is a full-function, precision, high-density 200 amp plasma system that combines precise, square, and dross free cuts with excellent speeds. If you are facing a high quality, heavy-duty job without a heavy-duty budget, the new ProLine 2200 is your answer. The system offers all of the benefits of precision, high-density plasma at a fraction of the cost of other systems. It is capable of production cutting gauge thicknesses through 1" thick with a maximum capacity of up to 2". The ProLine 2200 is equipped with manual controls so that you can tailor all of the cutting parameters to your specifications. Optionally, our patented INOVA torch height control system can be built into the ProLine 2200, greatly simplifying installation.

If you are looking for the latest in precision, high-density plasma process technology at a price comparable to conventional plasma, the decision to purchase a new ProLine 2200 plasma system from InnerLogic is truly a "no-brainer"!

3-Year Power Supply Warranty!
