

# ProLine 2150

## InnerLogic history of innovations:

- First with 200 Amp high-density plasma cutting
- First with PC based automatic process control
- First with extended power supply warranty
- **And now, first with affordable 150 Amp high-density plasma**

# ProLine 2150

The ProLine 2150 by InnerLogic is a 150 amp precision high-density plasma cutting system that combines precise, square, and dross free cuts with excellent speeds on gauge thick metals to 3/4" thick, and it has a maximum capacity of up to 1-1/2". Uncompromising cut quality, combined with excellent processing speed and the lowest initial investment, equates to the best value in precision high-density plasma. Even competitors' systems costing many thousands of dollars more cannot offer better cut quality or match the ProLine 2150's productivity. With the ProLine 2150's manual controls, you can tailor all of the cutting parameters to your specifications. Optionally, our patented INOVA torch height control system can be built into the ProLine 2150, greatly simplifying installation.

If you need to cut gauge thicknesses through 3/4" metals with square, clean, dross free edges while closely monitoring initial costs, the ProLine 2150 by InnerLogic is the machine of choice.

3-Year Power Supply Warranty!
